

Math and reading warm-ups for kids

Move counters, find the clue word in a sentence and break a multiplication into two easier parts.

01 Solve a two-bag fruit problem

One bag holds 7 apples and the other holds 5. You move 3 apples from the second bag into the first. How many apples are there altogether now?

Answer in apples

02 Read a sentence and spot the clue word

Read “Mia put her boots by the door before lunch.” Which word tells you when she put them there?

- ▢ Before
- ▢ Boots

03 Split a tricky multiplication into two easy rows

A board-game square asks for 7 × 6. You already know 5 × 6 is 30. How many more do the remaining 2 rows of 6 add?

Answer in more
